# Sync Function App Triggers

Tuesday, August 10, 2021   11:28 AM

Now we are going to perform a Sync Trigger, we are going to use the Cloud Shell, for
that please click on the following button on the portal:

It will load a command prompt or terminal:

In here we are going to run the following script:

```
#Sync Function App Triggers
#Developed by Dorian Vallecillo Calderon(dorianivc1@gmail.com/v-dovall@microsoft.com)
#Please fill the Subscription ID between the quotes
$sub="<your-subscription-id>"
#Please fill the Resource Group name between the quotes
$rg="<your-resource-group-name>"
#Please fill the Function App name between the quotes
$fa="<your-function-app-name>"
az account set --subscription $sub
$Bearer=$(az account get-access-token| ConvertFrom-Json | Select accessToken).accessToken
$endpoint="https://management.azure.com/subscriptions/"+$sub+"/resourceGroups/"+
$rg+"/providers/Microsoft.Web/sites/"+$fa+"/syncfunctiontriggers?api-version=2019-08-01"
$headers = New-Object "System.Collections.Generic.Dictionary[[String],[String]]"
$headers.Add("Authorization", "Bearer "+$Bearer)
$response = Invoke-RestMethod $endpoint -Method 'POST' -Headers $headers
$response | ConvertTo-Json
```

With that done, we have requested a forced Function App Trigger Synchronization

If you have any further questions or concerns, please feel free to contact me. I am always glad
to assist!

Kind regards,
Dorian Vallecillo Calderon Senior Support Engineer
